

## *Moulded foam components*

### **Product**

As base foam, PUR soft foam with sound-absorbing properties is used. The material tarnishes few and is hardly inflammable (hardly inflammable according to the German DIN standard 75 200 – MVSS 302 and DIN 4102 B2).

### **Advantages**

Practically, all three-dimensional contours are possible, with openings and without flow gates. Thus it is possible to produce parts with complex geometric configuration reproducible in dimensional stability and constant characteristics. By this method a constantly high quality is guaranteed. Foaming in of reinforcing and fixing elements is possible.

Batches can be traced back and individually identified by customer.

### **Range of application**

- computer manufacturing
- multispeed gearboxes production
- electrical appliances and small engines
- heating and refrigeration technology
