

Rubber bellows

Product

Adaptors made from special caoutchouc, executed by order, with or without fabric reinforcement. They are applied, for example, in rail transport means and are characterized by high resistance and stability under load.

Application

The bellows can be screwed or glued with a special glue matched to the respective caoutchouc.

For glueing, the surfaces have to be clean and dry.

Product characteristics

- high resistance to atmospheric corrosion
- high resistance to chemicals
- excellent behaviour in fire (hardly inflammable)
- high resistance to dynamic load

Range of application

- flexible connecting elements, perfectly suitable for joining vehicle units
